

Workshop on Context-awareness in Retrieval and Recommendation

in Conjunction with IUI 2011, Paolo Alto, California

Content and Goals of CaRR 2011

Context-aware information is widely available in various ways and is becoming more and more important for enhancing retrieval performance and recommendation results. The current main issue to cope with is not only recommending or retrieving the most relevant items and content, but defining them ad hoc. Further relevant issues are personalizing and adapting the information and the way it is displayed to the user's current situation and interests.

The aim of CaRR 2011 is to invite the community to discuss new creative ways to handle context-awareness. Furthermore, the workshop aims at improving the exchange of ideas between different communities involved in research concerning, among other machine learning, information retrieval and recommendation.

Important Dates

- Submission: November 12, 2010
- Notification: December 12, 2010
- Camera ready: December 19, 2010
- Workshop: February 13, 2011
